SATEX SEED CO. SEED & POULTRY SUPPLY ANNUAL

529 S. FLORES ST.
SAN ANTONIO, TEXAS

NOW IS THE TIME

TO PLANT A DEFENSE GARDEN

PLANT NOW AND BE READY FOR WHATEVER MAY COME

Higher wages and shorter hours are drawing labor away from farms and market gardens, where overtime means only longer hours and no extra pay. With many men in military training and others engaged in industries concentrating on the manufacture of implements of war, the problem of food production and the transportation of same may become a serious one. This is the time when every home garden will be a contribution to National Defense, and everyone who has the available space should plant and not wait until an actual food shortage may develop. A home garden will not only keep you well supplied with fresh vegetables, but will insure you that you will get the benefits of the rich vitamins which are found in same. It is a fact that vitamins are at the peak when the vegetables are picked fresh, and you are assured of the best in vegetables as well as materially reducing the cost of living.

Due to the war, shipments of vegetable seed from Holland, France and Denmark and many other

foreign countries have stopped and these important sources of seed supply are no longer available, and American Seed production at present is not sufficient for our normal requirements. Due to poor growing conditions this past year, there will be many varieties of seeds which will be exceptionally scarce, and the supply limited.

At the present time, we have ample stocks on hand of most varieties and can fill your orders promptly with the finest tested stocks of American grown vegetable seeds. Due to many short crops the past year, we advise you to place your order early that you may be insured of getting the seeds ordered, as at a later date, we may be able to fill orders only partially as stocks will be exhausted.

You can protect your family and contribute to National Defense by growing most of the vegetables you need in your own back yard. In so doing, you will gain greater independence, better health, economy, pleasure and security.

Sincerely yours,

SATEX SEED COMPANY

BEAUTIFY YOUR HOME WITH FLOWERS

There can be no greater joy than the planting of your own garden and certainly nothing more fascinating than actually growing from seed the plants and varieties desired. It is difficult to believe that anyone would contemplate leaving the grounds around their cherished home bare and unattractive, especially when so many beautiful flowers can be grown from seed, with so little effort and at such a small cost. Your home surrounded by a profusion of brilliantly colored and variously shaped flowers growing in neatly designed beds will delight your eye and as "Old Mother Earth" unfolds her beauty in all her majestic splendor you will be inspired with the feeling that the home is more beautiful than ever.

There is practically no limit to the beauty that may be built into your home grounds and at very small cost. PLANT MORE FLOWERS!

SOIL — A sandy loam is most preferable for flowers, but almost any type soil can be rendered suitable. If too heavy, add sand. Peat Moss will improve both light and heavy soils.

SOWING — After soil has been prepared, sow seed carefully either in rows or broadcast as you have decided, then COVER LIGHTLY. As a general rule most seeds are covered to a depth not exceeding four times the thickness of the seed. DO NOT COVER SEED TOO DEEP as they may not be able to come up. After covering PRESS SOIL FIRMLY with plank or flat side of hoe. Very small seeds should be sown on the surface of soil and merely PRESSED IN.

STARTING PLANTS INDOORS — Half hardy or tender varieties or even hardy flowers requiring a long season to bloom should be started in boxes for earliest blooms. Procure best soil available especially rich in humus and plant as previously explained. Place boxes near window where sunlight may reach them but do not let inside room temperature

get so high as to make plants grow rank and spindly. Keep soil moist but not wet. When three or four leaves have formed, transplant one inch apart in boxes or in open ground, if warm enough. Before setting plants in garden "harden off" by placing boxes outside on mild days until they are able to stand the weather without injury.

CULTIVATING — As soon as growth commences cultivate between rows and near plants to conserve moisture and permit the entrance of air but above all keep down weeds which can truly be called the robbers of the soil. Cultivate deeply at first and then gradually more shallow as plants get larger so their roots may not be injured.

WATERING — The best and safest time to water is early in the morning or in the evening. The roots of plants may be irrigated at any time of the day. Remember that one thorough soaking will do more good than many scanty sprinklings.

WHY SATEX FLOWER SEEDS ARE SUPERIOR

We supply a large group of flower growers who in turn supply the florist trade. These growers demand the best in flower seed as their livelihood depends upon producing quality flowers. All of our package flower seeds contain the same identical stocks that we supply to this critical growers trade. Do not confuse our seeds with the average flower seed that you pick up in commission boxes at your grocer or drug store. If you have never planted Satex Flower Seed, try them and note the difference. Better Germination — Better Flowers.

Balsam-Double Bush Flowering

AFRICAN DAISY

AGERATUM

(FLOSS FLOWER)

Perennial. One of the best summer blooming plants grown from seed. Rapid growers, early and constant bloomers. During the hot, dry summer months their bright flowers are produced in the greatest profusion. Set the dwarf sorts 10 inches apart and they soon make a low mass of charming flowers.

Satex Prize Winning Dahlias and Gladioli

GLADIOLI BULBS

CULTURE—Spade soil not less than 8 to 10 inches deep. Make your rows 18 to 20 inches apart and set bulbs 4 inches in the ground and 8 inches apart. Thoroughly soak plants when water is necessary. Do not sprinkle as it has a tendency to draw roots up to moisture. Keep cultivating. The more you do the better your plants and flowers.

DAHLIA BULBS

CULTURE—Dahlias do well in any well drained fertile garden soil in an open sunny location, and are as easy to grow as potatoes.

Before planting spade the ground well to loosen the soil thoroughly to a depth of six to eight inches.

When soil is warm and danger of frost is past, dig holes five or six inches deep, two to three feet apart, in rows three to four feet apart.

Lay tuber on its side—never on end—with eye upward, and cover with good dirt in which is mixed a little wood ashes if possible. Mark place of hill with a small stick. Sprout should show within three weeks.

After plant is up, remove all but one sprout. When this has grown to be twelve to fifteen inches high, pinch out the top to encourage lower branching and make it unnecessary to stake plant to keep from breaking over by wind.

When buds show, remove all but one bud on a stem, removing shoots and leaves at base of bud to give a better stem. Allow five or six blooming stems to a plant, but keep all dead flowers trimmed off.

DON'T BUY COMPLEXION, EAT IT, CHEMISTS SAY

The home garden is no friend of the beauty specialist where complexion is concerned, scientists tell us, because the properly balanced diet containing vitamin and mineral fresh vegetables will give nature its chance to do what was intended, bring health to the body, and with it, a good complexion.

Vegetables are not the only foods to produce such results of course, but they are the "deficiency" types which supply the hidden food element lacking in so many other modern table deficiencies. The fact that they are grown at home and can be used fresh from the garden without the loss brought about by being kept out of the ground, makes them doubly valuable for the health and complexion seeker.

Gather when half grown for best flavor. Cut close without injuring heart of plant, and another crop will spring up. Grows in any ordinary garden soil. In rich soil, however, and with good culture, it makes an amazingly luxuriant growth and furnishes an abundance of greens. Sow in rows 12 inches apart, and thin to 5 inches apart in the row. One ounce will sow 100 feet of row; 4 to 5 pounds per acre.

MANGELS or STOCK BEETS

ATTENTION!

FARMERS AND STOCK RAISERS

Too much cannot be said about this wonderful feed and every dairy and every farm and every stock raiser should have at least an acre or two of Stock Beets — the returns will be surprising. Sow in the fall and spring, give the ground thorough cultivation. After first cultivation, thin out, so as to stand 8 inches apart in the row, then cultivate same as you would corn. Sow 5 pounds to the acre, in rows 2½ feet apart.

MAMMOTH LONG RED. No other variety of Mangels can compare with this in yield. It grows well above the ground, is easily harvested; the deep red roots are strong, well formed and solid. Especially well adapted for deep soil. On good soil they will sometimes grow 18 inches long, leaves are dark, the flesh white, being veined with rings of rose-pink. An excellent keeper and a wonderful milk producer when fed to dairy cows. Oz. 15c; ¼ lb. 45c; lb. \$1.25, postpaid.

GIANT HALF SUGAR. This is considered by many the greatest beet for feeding stock; it is richer in sugar than the Mangels and not so rich as the Sugar Beet. It grows about one-half out of the ground and is an excellent feed. Oz. 15c; ¼ lb. 45c; lb. \$1.25.

One ounce will produce 1,500 plants; 4 to 6 ounces, an acre.

Broccoli

CALABREZE GREEN SPROUTING — 65 days — This is a distinct variety grown by Italian market-gardeners for Italian trade only. The plant forms a large solid head which remains green. Sow seed in frames early in spring; market in June and July.

Pkt. 5c; oz. 50c; ¼ lb. \$1.50; lb. \$4.50, postpaid.

CABBAGE (Continued)

CHINESE CABBAGE (Wong-Bok) — This wonderful variety produces a beautiful, crisp, celery-like head that bleaches easily. As a salad it rivals the finest lettuce grown; when cooked like spinach or cabbage makes excellent "greens." Sow seed in any good soil, making the rows 24 to 38 inches apart and thinning to 12 inches apart in the rows. It will not stand frost, so sow early in the fall and again in the spring. Be sure and try some of this wonderful variety, as it is easy to grow. Pkt. 10c; oz. 35c; ¼ lb. \$1.00; lb. \$3.00, postpaid.

CERTIFIED SEED POTATOES

IT PAYS TO PLANT CERTIFIED SEED;
ALSO TREAT WITH SEMESAN BEL

The most successful potato growers use nothing but certified seed. Certification has done for potatoes what breeding has done for horses, cattle, hogs, etc. Less disease, more No. 1 potatoes and greater profit to the grower. Every bag carries the tag of the inspection authorities; this is an assurance that every safeguard has been applied to have them as pure as is humanly possible.

CULTURE — Seed potatoes should be cut with 1 or 2 good eyes to each piece and planted in rows 24 to 36 inches apart, dropping a cut piece from 8 to 12 inches apart in the rows. Cover pieces about 6 inches and cultivate well after they are up but not too close so as not to disturb the root. Potatoes keep best if they are dug when the vines are about half dead. Plant potatoes in well manured or fertilized soil. Buy Certified Stock as they are free of Scab, Spindletuber and Rhizostonia.

AUXILIN

MIRACLE ROOT GROWER FOR CUTTINGS — Many reasons for failure of rooting in the plants have been suggested. The discovery of **AUXILIN** now indicates that cuttings often fail to grow roots, either because this growth-stimulating chemical is not present or is trapped, and therefore unavailable to the cutting, or is present in less than effective quantities.

AUXILIN promotes vigorous and rapid growth of the plant itself, and if the cuttings are taken from woody plants, they usually produce stronger and more uniform specimens. For example, in the case of evergreen, new growth will follow the first year after the cuttings have rooted. Cuttings with flower buds on them will usually flower the same season.

DUBAY SEED DISINFECTANTS

Prevent Disease Losses, Increase Stand and Yields

SEMESAN — For flower, vegetable and nursery crops. The protection afforded by Semesan against seed decay and damping off, assures the grower of better stands. Good stands of healthy, vigorous plants usually produce larger yields and better quality flowers, vegetables and fruits than thin stands of weak or stunted plants. For these reasons seeds treated with Semesan generally produce more profitable crops.

1 oz. treats 15 to 30 lbs. of seed by dust method; 40 to 60 lbs. by liquid method.
1/2 oz. pkt. 10c; 2 oz. 40c; 1 lb. \$2.50; 5 lbs. \$11.40.

SEMESAN BEL — For seed potatoes. Controls scab and Rhizoctonia on white potatoes and prevents stem rot and scurf of sweet potatoes. 1 lb. treats 60 to 80 bushels.

In addition to killing seed-borne diseases, Improved Semesan Bel protects the seed pieces from rotting under cold, wet soil conditions, assuring better stands and larger yields. 1 lb. treats 60 to 80 bushels.
2 oz. 30c; 4 oz. 55c; 1 lb. \$1.65; 5 lbs. \$7.15.

2% CERESAN — For cotton, millets, peas, sorghums and narcissus. Controls surface seed-borne diseases and prevents seed rot. Reduces damping-off of seedlings. 2% Ceresan treated cotton seed in forty tests on farms produced almost 60% better stand before chopping than untreated seed. After chopping, the treated rows still had nearly 30% more plants than the untreated rows. At picking time, the treated rows outyielded the untreated by 16.2%. Almost one-sixth more seed cotton produced as a result of seed treatment with 2% Ceresan.

1 lb. treats from 5 to 8 bushels of seed.
1 lb. 75c; 5 lbs. \$3.30; 25 lbs. \$14.50; 100 lbs. \$52.00.

NEW IMPROVED CERESAN — For wheat, oats and barley. Controls smuts of practically all kinds. In actual tests on farms, New Improved Ceresan treatment increased yields as follows:

Wheat — An average of more than a bushel per acre increase or nearly 6%.
Oats — 3.2 bushels per acre increase or over 18%.
Barley — Increase nearly 6% over untreated seed.
1 lb. treats 32 bushels of seed.
4 oz. 30c; 1 lb. 80c; 5 lbs. \$3.40.

SEMESAN JR. — For Seed Corn. Every grower knows the importance of securing good stands of healthy plants. But good stands, especially from early plantings when the soil is cold and wet, are hard to get.

New Improved Semesan Jr. helps to give you better stands by generally protecting the seed from rotting and the seedlings from blights and certain root-rots. 1 lb. treats 8 bushels of seed corn.

1 1/2 oz. pkt. 15c; 1 lb. 75c; 5 lbs. \$3.00.

ANDERSON STICKLESS FEED-O-BOX
NO STICKS NO NAILS

Good hatchery managers like to know that their chicks are being delivered in the best possible manner. By standardizing on Stickless Feed-O-Boxes you know that every box taken out of your hatchery, whether for distant shipment or for local delivery, is provided with adequate ventilation.

The partitions which extend above the lid of the box, separating one box from another, give an inch space of ventilation between boxes. The bowed covers of the box prevent the shutting off of ventilation when boxes are stacked against wall or against other boxes. The Feed-O-Box punching itself provides additional ventilation in part when necessary.

Certainly during a busy hatching season every minute counts and the time and labor saved by using Stickless Feed-O-Boxes will mean many dollars saved for you.
30 Boxes per bundle.

All folds perfectly scored—Partitions scored so they turn in one direction on one side and in the reverse direction on the other side. Insides slightly scored where partitions attach to box.

All holes perfectly and uniformly semi-punched to give complete control of ventilation.

Chick boxes, wrapped 30 to bundle; 3 week boxes, 10 to bundle; 6 week boxes, 10 to bundle. We do not break bundles.

ANDERSON LOCAL DELIVERY BOXES
CORRUGATED

A good corrugated box, in standard sizes, but of lighter weight material than the Standard Stapled Box.

Designed for local deliveries, it offers a saving to the hatcheryman who does a lot of custom hatching or who sells most of his chicks near home.

SEMI PUNCHED FOR TRI-LOK SPACERS

Home Town Box Lids are semi-punched to receive Tri-Lok Spacers —another economy—Tri-Lok Spacers may be inserted in the slots to furnish ventilation while chicks are stacked in the hatchery or sales room, then removed when the box is delivered to the local customer and used repeatedly in other boxes or they may be left in place if needed during transportation.

E-Z-GIVE PREPARATION

For
WORMER—TONIC—CONDITIONER
 Sheep — Goats — Poultry — Turkeys — Horses & Dogs

Goat and Sheep Raisers!—Why drench or capsule your livestock for worms, which is only a temporary relief from worm infestation? Eliminate all the labor of catching your sheep or goats and treat them individually, by using E-Z-Give Preparation. Just add one pound package to each 50 lbs. of salt and feed this mixture every other week. Not only rids your livestock of worms, but keeps them healthy and thrifty and costs less than 4½¢ per head per year to use it.

Poultrymen!—Keep your flocks of poultry or turkeys thrifty and healthy with E-Z-Give. Just mix E-Z-Give Preparation with your mash and feed as directed. Will keep your flock free of worms; does not curtail egg production, and costs less than 4½¢ per head per year to use. P. T. Z. CAPSULES

THE NEW WORM TREATMENT FOR SHEEP
 MADE WITH PHENOTHIAZINE

PTZ Capsules employ the drug, Phenothiazine, which has recently been discovered to be an effective anthelmintic for many of the common worms infesting sheep. The research work on this material was done in the U. S. Bureau of Animal Industry and has been corroborated by investigators in Canada and Australia.

Various types of treatments are used for different species of intestinal parasites in sheep, but none has yet been discovered which does so effectively remove so many common types of worms. Of particular importance is the effectiveness of this drug against the nodular worm (*Oesophagostomum columbianum*), for which there has been no effective treatment.

In addition to the nodular worm, Phenothiazine has been found to be effective against the following species of worms which infest the digestive tract of sheep: common stomach worm (*Haemonchus contortus*), the lesser stomach worm (*Ostertagia* spp.), the "bankrupt" worm (*Trichostrongylus* spp.), the hookworm (*Bunostomum trigonocephalum*), and the large-mouthed bowel worm (*Chabertia ovina*).

It is difficult to differentiate with certainty, the various species of worms affecting sheep, so the stockman is particularly fortunate to have available a treatment which will remove most of the common types.

PTZ Capsules contain the recommended dosage of Phenothiazine, together with other materials which have been found to give increased efficacy.

Because of the relatively large dosage that is required, the materials have been compressed into tablet form and enclosed in a gelatin capsule to make possible convenient administration.

The safety of PTZ Capsules has been demonstrated by the administration of several times the recommended dosage without any bad effects whatsoever.

ONE-RUB FLEAFINISH

ONE-RUB FLEAFINISH is the latest discovery for the complete extermination of fleas and lice on dogs, cats or any other animal. One-Rub differs from the general run of flea powders in that it is not just another flea powder, but an absolutely guaranteed flea killer and the most economical because it only requires a small quantity on the animal's back between the shoulders rubbed in on the skin, and in less than 24 hours every flea on the animal will be dead.
